metacarpal

GEM

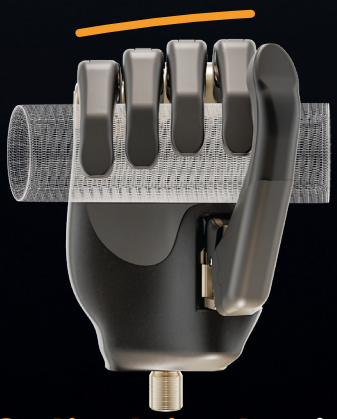
Grasp every moment.

The world's first multi-articulated body-powered hand.

Feel the confidence in every grasp — powered by your body, perfected by Reactive Grasp Technology™.

Spherical grip

Fingers spread naturally to cradle the surface, distributing pressure evenly for a secure, stable hold without slippage.



Cylindrical grip

All fingers wrap symmetrically around the object, ensuring a firm, balanced grip for lifting or carrying.

Irregular grip

The fingers adjust individually to contour to angled surfaces, maintaining maximum contact on uneven or asymmetrical items.

metacarpal

Power grip

Delivers maximum grip strength and stability

Pinch grip

Facilitates precise object handling

Lateral grip

Provides stable lateral force for thin objects

We’re on our way to changing the way the world thinks about prosthetics—by building for a future where upper limb prosthetics are embraced, trusted and never left behind.

If you are a clinician, user or researcher and want to demo the Metacarpal hand, we would love to hear from you.
