

# One Sleeve

## PRODUCT HIGHLIGHTS:

- **Pre-flexed at 22.5°**
- **Allows for easy knee flexion**
- **Use with WillowWood One System for airtight seal**

### Overview

Designed for use with the WillowWood One® TT System, the One Sleeve is a pre-flexed internal sleeve that allows for a comfortable fit without limiting the knee's range of motion. The fabric is adhered to the proximal and distal areas of the sleeve but left loose in between to allow for knee flexion without creating friction on the knee. The non-fabric-covered proximal portion of the sleeve may be trimmed to suit patient needs. Additionally, this pre-flexed silicone sleeve does not bunch behind the knee, ensuring when standing, sitting or bending.

Unique among WillowWood's sleeve products, the 'fins' on the One Sleeve establish an airtight seal between the flexible and the laminated sockets when used as part of the WillowWood One TT System.

This cutaway view shows how the One Sleeve works with the WillowWood One TT System to create an airtight seal.
