

OVATION TLSO 464

PRODUCT DESCRIPTION

The Thoracolumbosacral Orthosis (TLSO) 464 is a specialized version of spinal braces designed to provide optimal support and stability to the thoracic and lumbar regions of the spine. The TLSO 464 is used for treating a range of spinal conditions and injuries that require immobilization of the lumbar and thoracic spine.

KEY FEATURES

- Universally sized, comfortable and easy to wear.
- Ergonomic strapping system that can be worn over or under the shoulders.
- Easy push-button steel telescoping sternal column.
- Does not require any tools to adjust.
- Lightweight and low-profile.
- Anterior and posterior panels are fully customizable.
- Steps down to an LO456 and L0627 in seconds.

WHY OVATION

Other braces are cumbersome and difficult to adjust. Other TLSOs have a significantly bulkier sternal column compared to our brace and use an outdated adjustment mechanism that requires the patient or clinician to unscrew bolts at the front of the brace to adjust the height of the chest plate.

Additionally, older models require two screws to be loosened to adjust the height of the sternal column and another two screws to be loosened to adjust the angle of the upper chest padding.

THE OVATION TLSO 464 INCREASES PATIENT COMPLIANCE WITH A DESIGN THAT IS COMFORTABLE, EASY TO WEAR, AND SIMPLE TO DON AND DOFF.
