

FREQUENTLY ASKED QUESTIONS

WHAT MAKES THE RUSH FOOT® SO DIFFERENT?

The design is radically simple with no bolts, screws, fasteners, or Kevlar-reinforced over-wraps. Our proprietary sole plate design provides for mid-stance support with a continuous point of contact throughout the prosthetic step, making it the smoothest foot in the prosthetic industry.

IS THE RUSH FOOT® NEARLY INDESTRUCTIBLE?

Yes, the RUSH Foot® is made from a unique glass fiber composite. The material that is extremely flexible and durable, thus making the RUSH Foot® nearly indestructible.

WHAT IS THE COMPOSITION OF THE MATERIAL?

The unique fiber is reinforced glass composite of the highest quality with multiple applications in the aerospace industry.

DOES THE RUSH FOOT® HAVE A “DEAD SPOT”?

No, the RUSH Foot® does not have a dead spot. RUSH Foot® replicates the ankles flexibility and roll through motion to create a stride with no dead spot. Our proprietary sole plate is designed without an inherent arch providing a continuous and rolling point of contact throughout the entire prosthetic step, making it the smoothest most effortless foot available on the market today.

IS THE RUSH FOOT® WATER-PROOF?

Yes, the RUSH Foot® is 100% waterproof. Unlike many leading carbon fiber feet that are water resistant, the RUSH Foot® provides the ability to be fully submerged in water. This is a direct result of the radically simple design of the RUSH Foot®. The radically simple design of the RUSH Foot® departs from the use of distal bolts, screws, fasteners, or overwraps. Unlike competitors' feet, our composite never comes in contact with itself anywhere on the product or under any circumstances. This makes outside dirt or debris incapable of acting as an abrasive and causing any type of failure.

WHAT MAKES THE RUSH FOOT® GREAT FOR ALL TERRAINS?

Due to the unique design, the two composite segments are buffered by a rubber molding that prevents any abrasions from occurring. This is a result of having no bolts, screws, fasteners, or overwraps like competing feet. The majority of carbon fiber feet have multiple bolts, screws, fasteners or overwraps that allow dirt and debris to compromise the carbon fiber. These extraneous parts always create stress points that further compromises the durability of carbon fiber.

HOW DO YOU MAINTAIN THE RUSH FOOT®?

The unique design of the RUSH Foot® makes it virtually maintenance-free. If you get debris in the foot shell, a simple water rinse should suffice.

WHY IS THE PLANTAR FLECTION BUMPER ONLY ATTACHED TO THE KEEL/INSTEP?

The bumper is only attached to the keel to allow the sole plate and the bumper to separate at terminal stance and toe-off. This allows maximum toe deflection and rotation at the toe for a smooth roll through. It also allows the sole plate to rotate more freely for multi-axial rotation. The overall result is a highly compliant toe off with smooth action.

DID THE RUSH FOOT® EXCEED ISO TESTING REQUIREMENTS?

Yes, the RUSH Foot® far exceeds the testing requirements laid out by the ISO-10328.

HOW DO I ORDER THE RUSH FOOT®?

You can order the RUSH Foot® in several ways. Call, fax our office directly, contact your sales representative or visit our website.

ABILITY DYNAMICS

1236 W. Southern Ave., Suite 101

Tempe, AZ 85282
