## The breathable liner that changes everything

**No more sweat. Just comfort. Game changing**

Sweat and moisture between the residual limb and traditional liners can cause irritation, discomfort, and reduced grip – leading to less security and confidence. The SoftskinAir® liner solves this with a unique micropore structure that channels moisture and air through the liner wall, keeping the skin drier and more comfortable.

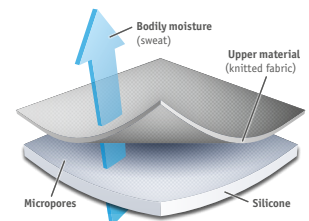

### Key Benefits for the User:

- Comfort: Dry, cool skin for longer lasting wear time
- Security: Better adhesion and stable fit
- Control: Functional cover for easy donning and support

### Technical Specifications and Options:

- Options: Shore hardness 30, 40, 50; Trans-Tibial and Trans-Femoral versions
- Suspension: Locking with connector or cushion with smooth contour
- Quality & Care: Durable medical-grade silicone, machine-washable at 30 °C
