PDAC APPROVED

MAX L0637 Custom Fitted
L0650 OTS

TLSO ATE L0464 Custom Fitted

TLSO DLK L0462 Custom Fitted

The Expander™ Traction LSO features a unique air pocket expansion system that provides effective lower back pain treatment by reducing pressure within the vertebrae. The Expander™ LSO with removable plastic panels provides immediate pain relief and back support while restricting and controlling unwanted motion. When inflated, the Expander™ provides traction between the inferior of the rib cage and the superior part of the trochanter, creating weight-bearing forces away from the lower back and reducing pressure in the lumbar spine. The plastic panels on the Expander can be removed to adapt to all facets of patient rehabilitation. The Expander™ is lightweight and can be discreetly worn under normal clothing.

Typical Indications

- Bulging or Herniated Discs
- Degenerative Disc Disease
- Sciatica
- Spinal Stenosis
- Spondylolysis
