## Deluxe Wrap Knee 571-DxWNKO

The new **Deluxe Wrap Knee** by RCAI provides functional knee stabilization for ACL, PCL, MCL, and LCL instabilities. The lengthened hinge arms, extra straps above and below the patella, and a more closed patella design of the brace provide increased control of the knee joint during walking or athletic activities. The Deluxe Wrap Knee offers flexion/extension control settings in 15° increments, with a 10° hyperextension stop set. The added condyle shells attached to the hinges provide improved tracking of the knee. The breathable, latex-free construction of the brace provides therapeutic warmth and compression to enhance venous return and improve proprioceptive input, while keeping the skin dry and comfortable. The wrap design is suitable for patients with edema of the knee, or patients with difficulty applying traditional knee sleeves. The criss-cross attachment at the back of the knee offers additional resistance to hyperextension.

571-DxWNKO

Removable criss-cross attachment to discourage hypertension.

15° increments with a 10° hypertension stop.
