BLOCKERS

Blockers are pre-laminated, pre-skived sheets of material that, when heated, allow you to fabricate a pair of custom foot orthoses quickly and easily.

The rear-foot portion of the blocker material is thicker than the forefoot, allowing for grinding of posting and edges of the orthoses. These pre-laminated materials save you inventory, space and time. Numerous styles are available to address any clinical need.

Custom combinations are also available upon request.

Blockers listed on this page are 14" x 11", typically makes 1 pair of orthotics.

BLOCKERS FOR CAD/CAM MILLING

Modern technology is now being utilized in the fabrication of orthotic appliances and the past several years have seen important advances regarding its application. CAD-CAM machining, noted for its efficiency and close tolerance accuracy, is now acknowledged as an extremely successful means of designing and producing custom orthoses.

ACOR® recognizes that the material requirements for CAD-CAM differ from those of traditional manufacture so for that reason we supply Microcel Puff®, Plastazote®, MultiCork™, FM™ and other materials in various dimensions and densities which are better suited to this form of production.

ACOR® can also prepare materials to your specifications.
