# 100% breathable microfiber that looks and feels just like real leather

With FabriFit, you can produce 100% breathable, comfortable products with an excellent finish and optimum climate. FabriFit is an innovative, durable microfiber which is 50% lighter than leather, hypoallergenic, and fully moisture regulating.

This unique microfiber is suitable for a wide range of practical applications, from specialist orthopedic solutions to perfectly fitting insoles or support soles or for light, elastic athletic shoes.

## FabriFit: benefits for shoe and insole manufacturers

- Create durable shoes with a completely breathable microfiber
- Excellent leather replacement: easier to process, less environmental impact
- Major advantages in the areas of thermal and moisture regulation
- Considerably lighter than other materials
- Stable material thickness and highly tear resistant
- All FabriFit materials are extensively PFI tested
- High production efficiency and 100% recyclable

# The best foot comfort, fit and appearance for any (orthopedic) shoe

FabriFit breathable microfibers are available in a wide range of structures and colors. The material is strong, highly tear resistant and less harmful to the environment. Color, structure, thickness and delivery format can be customized according to your needs.

FabriFit allows you to create a fully customized product: choose the material structure, color and the delivery form that best suits your shoe or insole.

## The benefits of FabriFit for end-users

- High level of moisture-regulating capacity
- Extensive color assortment in a choice of structures and delivery formats
- High durability and color-fastness
- Washable at 95° C without shrinkage or loss of properties
- Prevents nearly all odors
- Hypoallergenic
- Highest levels of foot comfort
- Light and elastic material and a supple fit

## FabriFit is available in two distinct structures

### **FabriFit Smooth**

Looks and feels like natural leather, with a smooth surface structure.

Available on rolls, as sheets or as die-cut parts.

Thickness: 0.8mm.

### **FabriFit Semi-perforated**

A smooth basis, with a regular pattern of small perforations.

Available on rolls, as sheets or as die-cut parts.

Thickness: 0.8mm.
