ANTERIOR THORACIC
EXTENSIONS

Edge™ SL is a rigid spinal system designed to provide your patients with maximum stability and support. Edge™ SL restricts and controls unwanted motion while providing intracavitary pressure to unload the intervertebral discs. Edge™ is ideal for geriatric and other patients who tend to suffer from skin break-down or sores, yet require maximum support. Edge™ SL combines rigid anterior and posterior polymer shells with removable soft padding to keep your patients dry and comfortable by wicking away moisture. The back panel has built-in reinforcement and a spinal relief opening. The Edge™ spinal system provides superior stabilization and support that your patients need with the ultimate comfort they deserve.

Typical Indications • Burst Fx • Chronic Back Pain • Compression Fracture • Degenerative, Herniated or Bulging Disc • Kyphosis • Laminectomy • Osteoporosis • Paraplegia • Post-Operative • Spinal Stabilization • Spinal Stenosis • Spondylolysis • Spondylolisthesis
