

The Meridian® adjustable range of motion ankle joint is now made with an improved stainless steel to prevent breakage. With a sleek and low profile design, this joint is lightweight, durable and can be set in infinite degrees of motion, without changing parts. Precise degree fine-tuning can be locked into any degree of plantar/dorsi-flexion. All models come complete with hardware. The Fabrication Kit (sold separately) is reusable and highly recommended, although not necessary, for fabrication.
