

ALPS™ GEL SHEETS

The ALPS™ Gel sheets are made out of EasyGel, which contains an antioxidant that is an effective scavenger of free radicals and hydroxyl groups. This special formulated gel helps aid in pressure distribution and the prevention of ulcers.

The solid gel is firm enough to provide full support to extremities, yet soft enough to yield maximum comfort. Its low modulus of elasticity allows for ease of stretch, allowing the gel to reduce shear forces on the skin making it extremely comfortable.

ALPS™ Gel sheets feature gel on one side and fabric on the other. Available in 3mm and 6mm thickness.

Beneficial effects to the skin of patients have been reported. Clinical trials are under way at prominent clinics in the Midwest and the West Coast of the United States.

This case history has been provided here as anecdotal evidence of the benefits that some patients have reported.

This patient is a severe diabetic, insulin dependent with compromised vascularization. A local hospital called Jim McElhiney, CPO, in Nashville, TN to evaluate this patient.

Taken prior to the fitting by Jim McElhiney. The patient had been out of her prosthesis for 3 weeks and was being treated with wet and dry dressings. She was then fit with an Easyliner and EasySleeve created using ALPS™ Easygel.

After one week post initial fitting.

After three weeks post initial fitting.
