

T39 Hyperextension Orthosis

- Articulating, adjustable pelvic band
- Posterior pad may be used horizontally or vertically
- Swivel sternal pad for patient comfort
- Latch-lock clamp closure allows ease of donning and doffing
- Available in regular (T39) or short (T39S)
- M/L and height adjustable
- Removable, washable pads

Indications: Osteoporosis, Thoracolumbar fractures T6-L1 and post surgical support

Contraindications:

- Three-column spinal fractures involving anterior, middle and posterior spinal structures.
- Compression fractures above T6, because segmental motion increases above the sternal pad
- Ineffective in limiting lateral bending and rotation of the upper lumbar spine
